

RMSI has proven experience and expertise in end-to-end enterprise software application development which include the entire spectrum of integrated software services and business solutions. Our customized software solutions range from desktop to large, scalable and secure web-enabled systems for enterprise and public portals. We have a reputation of either building customized solutions from ground up or to take over the maintenance and support of the client's existing applications.

Using the best-of-breed technologies from ESRI, MapInfo, Autodesk, Intergraph, and ERDAS and leveraging its domain experience of over a decade, RMSI has been exceeding expectations by offering integrated solutions at improved quality and quick delivery times. RMSI is a SEI CMMI Level 5 company and has adopted these processes as a framework to improve its software engineering practices.

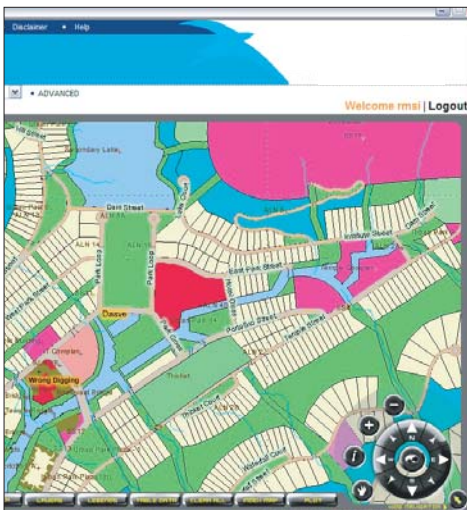

Areas of domain expertise

- GIS and Engineering
- Insurance
- Media and Business Information

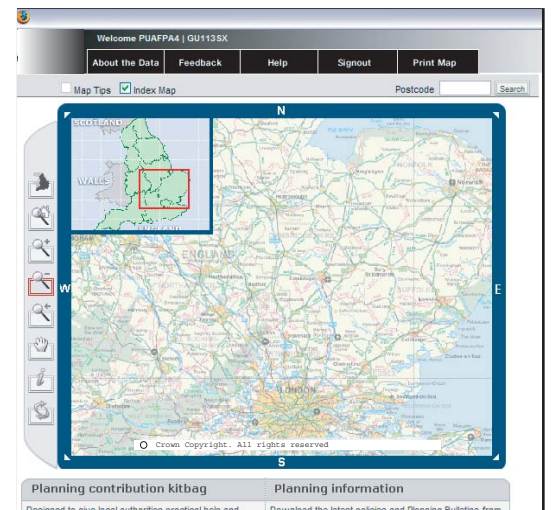

"I have worked with RMSI on a number of GI projects including data capture, system development and system support. I have been completely satisfied with the quality of their work and dedication of their staff who have delivered the work on time, to budget and to the required specifications."

Ian Storey, WISARD Project Manager,
ARAD, National Assembly of Wales

- Designed and developed a web-enabled sports information system, incorporating interactive software applications, a user-friendly interface and the ability to perform complex attribute based searches for sports facilities in England
- Developed a web based mapping and a Decision Support System (DSS) to facilitate data analysis and visualization

Web Geospatial Applications

RMSI provides customized end-to-end scalable web based geospatial applications that allow clients to access maps, display relevant feature levels, and integrate disparate datasets.

Web Mapping Applications

We offer complete web mapping application development services that include data collation, data rationalization, conceptualization, portal development, hosting services, and remote website management.

Vehicle Routing and Logistics Applications

Our expertise lies in providing a range of navigation and tracking solutions that includes applications for fleet management, consignment tracking, bus scheduling, and dispatching. We develop, update and maintain high quality points of interest, and accurate street data products for in-car navigation, emergency services, and tracking.

Application Development

RMSI follows the iterative lifecycle development model to deliver end-to-end software development projects. This includes all project phases such as requirements analysis, solution architecting, design, coding, testing, documentation, deployment and maintenance.

Product Maintenance and Support

We provide feature level and request level design and development for products, bug fixing, enhancements, operational support, and product level testing by following a proven onsite-offshore delivery model and world-class software development processes.

Business Intelligence and Data Warehousing

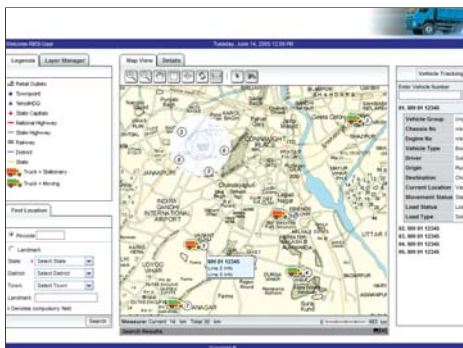

Our business intelligence and data warehousing services consolidate diverse information sources and data systems to enable clients to efficiently analyze information and make more informed operational and strategic decisions. Business intelligence solution includes data capture and conversion from existing systems, data updating, incorporation of customized tools, and data archiving services.

Enterprise Application Integration (EAI)

RMSI can integrate various legacy systems and applications to allow the seamless flow of information within the whole enterprise system and enable automation of business processes. RMSI has considerable experience of working with both proprietary and industry standard Message-Oriented Middleware (MOM) and EAI engines.

Application Testing

RMSI's services include creation of test cases for functional, system integration, load, stress, performance and regression testing, execution of test cases, defect reporting and defect database maintenance. RMSI uses industry standard quality control tools such as Rational Test Studio and Rational Enterprise Studio and has a proven offshore testing model.
