

RMSI

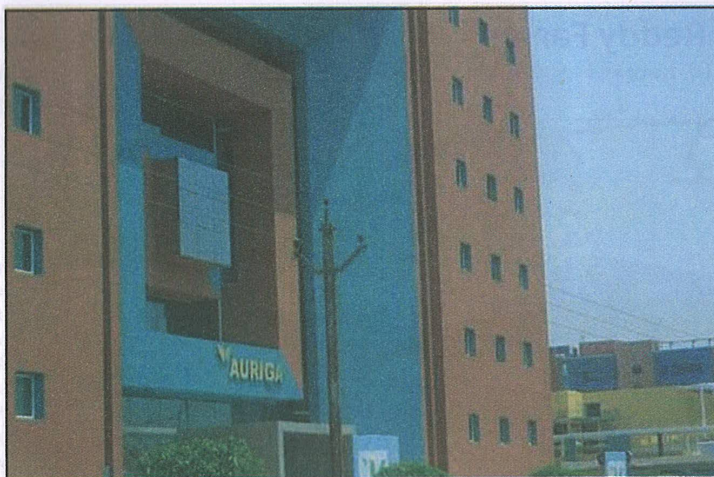

Provides consultancy for crop productivity improvement and solutions for farm development

RMSI is a professional geospatial solutions and software services organization. Established in 1992, they have been offering solutions to agriculture and natural resources sector in addition to industries such as utilities, telecom, land information management, government and funding agencies, and insurance. RMSI is headquartered at Noida, National Capital Region and has two additional development centers in Hyderabad and Dehradun.

Dr. Siva Subramanian

RMSI provides agri-intelligence information, consultancy for crop productivity improvement, solutions for farm development planning and integrated solutions for mineral and energy resources. Their key solutions include agriculture development and supply chain management, environment and forestry, mining and mineral exploration feasibility, oil and gas services. "RMSI has a multi-disciplinary group comprising of agronomists, pedologists, entomologists, plantation experts, agri-economists, agri-statisticians, and livelihood experts with extensive knowledge and years of proven expertise in the natural resources domain. Our division has executed several large scale projects across the globe with a key focus on Indian,

South-East Asian, and African markets" shares Dr. Siva Subramanian, Head, Agriculture & Natural Resources. Their target customers include governments, multilateral funding agencies and large corporate houses involved in the agriculture and natural resources value chain. "Our technical and consulting solutions have helped in developmental planning and effective decision making for supply chain management. Our solutions take into account current global issues such as food security, sustainable livelihood development and climate smart agriculture" adds Dr. Siva.

Some of the projects taken up by RMSI stand testimony to their deep domain expertise. They have carried out sustainable livelihood projects for the state government in Tripura. This project enabled bamboo based livelihood for local communities. Specific research and development projects for pesticides, insects and diseases for large Indian corporate, creating pest resistant seed varieties and for their crop productivity improvement are the other successful tasks taken up by RMSI.

RMSI has a global footprint and client base. Their competitors include large to regional organizations that provide agriculture and natural resources consulting services. However Dr. Siva believes it is their unique ability to synthesize domain knowledge with new and emerging technologies that sets them apart from the rest. Currently, RMSI is working on Supply Chain Management models and technical planning for farm development.

Carbon credit, carbon management projects, federal REDD+ projects and food security projects are the other aspects that would be the focus areas for RMSI in future.

Dr. K.S. Siva Subramanian is a doctorate in remote sensing and geomorphology from the Indian Institute of Technology, Mumbai, India. Dr. Siva has over 28 years of extensive experience in information technology applications in agriculture, geo sciences and natural resources. He is regarded as a global technology expert and is regularly called upon to provide technical consulting for maximizing the utilization of natural resources. He is a life member of the Indian Society of Remote Sensing and the United Nations Outer Space Organization (UNOOSA).
