

SUITE FOR END-TO-END MAP DATA DEVELOPMENT

RMSI **MapPro** is a workflow-driven, mature, end-to-end suite of production and quality tool for each stage of the map production lifecycle — from input preparation, network data capture, attribute conflation, video data integration, to POI integration. These tools are integrated with the work flow management system and calculate the efficiency at each production step from the system itself. RMSI MapPro is a highly configurable and customizable solution and its processes can be further customized based on project requirements.

RMSI

KEY FEATURES

- Ready to deploy, proprietary suite of integrated tools
- MapPro also includes automated QA/QC tools for each stage of the production cycle
- Collection of 50+ customized tools such as: Layer-wise feature capture; grade separation; image access; auto attribute transfer; assign/remove navigation attributes; checking geometrical relationships
