

RMSI Partners with the Understanding Risk Forum 2018, Mexico

May 14 - 18, Palacio de Minería, Mexico

RMSI, a global natural catastrophe and climate risk management consultancy is proud to partner at the upcoming Understanding Risk Forum 2018 from May 14-18, 2018 at Mexico, where RMSI experts will be engaging at multiple platforms during the event.

On Day 1 of the event, RMSI will be running an exclusive side event on 'Importance of Numerical Models in Prediction of Extreme Events'. The session experts Dr. Murari Lal, Technical Head and Dr. Indu Jain, Cyclone Specialist, RMSI will be highlighting how sophisticated technology driven numerical models can be used to accurately predict the intensity and extent (hazard scenario) of extreme events that can hence, serve as a crucial input to disaster management planning. The side event is planned on May 14, 11am to 1pm at Sala C3.

On May 14th, a partnership day will be organized by World Bank and GFDRR on "Understanding risk for financial resilience". As part of this DRFI (Disaster Risk Financing & Insurance) day, an exclusive session on "Learning from the private sector in the

design and implementation of last mile solutions to reach beneficiaries" will be Co-Lead by Pushpendra Johari, Head - Risk & Insurance, RMSI.

Dr. Murari Lal, Technical Head, RMSI will also be initiating a sub-community kick-off on "Challenges that weather extremes are posing on food security" as part of the UR event. This is planned on May 15 from 2 to 4pm at C1, where RMSI has invited professionals and sector experts to showcase their implementation approach and methodology on mitigating the impacts of recent disasters in support of protecting the livelihood of communities and explore the scope of replication in other regions prone to similar disasters and risks.

During the main event days from May (16-18), RMSI delegates would be participating in various technical sessions and interacting with clients and global experts on our specialized services in disaster risk reduction, climate change and water resource planning.

About RMSI

RMSI is a technology provider that manages risks associated with natural and man-made hazards, by applying innovative methods and global best practices. RMSI focus areas are: agriculture risk, property risk, urban risk, flood, earthquake and windstorm risk modeling. RMSI has nearly two decades of experience in this domain and has worked extensively with insurers, reinsurers, state and federal governments and multilateral funding agencies.

The company has an employee base of over 3500 resources and the highest levels of certifications and accreditations including CMMI Level 5, ISO 27001, ISO 14001, ISO 18001 and ISO 9001:2015. In addition to its state of the art development centers in India, RMSI has five fully owned international subsidiaries – RMSI North America Inc., RMSI Canada Inc., RMSI Ltd., U.K., RMSI Australia Pty Ltd. and RMSI Middle East Limited.

About Understanding Risk Forum

UR is a global community of 7,000+ experts and practitioners active in the creation, communication, and use of disaster risk information. Members share knowledge and experience, collaborate, and discuss innovations and best practice in risk assessment. The community convenes every two years at UR Forums – five-day events that highlight groundbreaking work, facilitate nontraditional partnerships, and showcase new technical know-how in disaster risk identification.
