Schneider Electric named RMSI North America – an IT services firm providing geospatial and software solutions – an ArcFM Specialized Partner, the smart grid firm said Friday. RMSI is a trusted leader in providing utilities and telecom firms with GIS solutions that cross the entire geospatial value chain, it added.

As an ArcFM Specialized Partner, RMSI's data solutions and migration expertise will offer customers a great choice for their data needs as they prepare to implement Esri's new Utility Network Management Extension, Schneider said. Customers will have a source for leveraging Schneider's ArcFM suite of solutions that streamline the design and construction workflow, enabling organizations to get work done more efficiently.

The ArcFM suite includes spatial asset management, network planning and analysis, operational awareness, field mobility, and seamless integration with key enterprise systems, it added.

"GIS data is at the heart of an organization's ability to work smarter and faster," said Schneider Electric General Manager Jay Stinson in prepared remarks. "We are thrilled to partner with RMSI and offer our ArcFM solutions to help more companies realize immediate improvements in their work today while preparing for the digital transformation in the years ahead."

"We have complimentary capabilities that can be combined to provide powerful solutions to utility and telecom companies," said RMSI CEO Anup Jindal in prepared remarks. "Customers can leverage RMSI's proven data management and migration tools and frameworks to jump start their ArcFM implementations and Utility Network Implementation."
